

Week 11: Helpful Pointers

22 August 2024 01:16

1. Network Flow problems:
 - a. What's the maximum flow, some dry runs, modelling a problem as a network flow problem
2. Linear Programming- given a problem, identify the constraints
3. Intractability- which class of problems is a subset of which other problem class, classification of problems into NP hard or not.
